

## GUARD

GUARD is a blinker designed for installation in a host of configurations, enabling maximum vertical/horizontal positioning flexibility on pillars or walls. The external support for installing the antenna cuts down on installation time and integrates all elements in a single product. Available in different versions 115/230V 12/24V, with fixed light (flashing due from main board) or intermittent light (flashing unit inside the blinker).

### Description

Guard 230Vdc 25W [intermittent]

Guard 24Vac 15W [fixed light]

Guard 12Vac 21W [fixed light]

Green cap for Guard
